

				more expensive part typically
Technologies used	Bluetooth, Infrared and Wi-Fi	Ethernet, Wi-Fi	Satellite, Frame relay, MPLS and ATM	Mixed

Conclusion: In conclusion, I have used a table to describe the types of networks available, which are PAN, LAN and WAN. I have shown how accessible they are, the transmission media used, the set-up costs and the technologies used. The table also shows that there are similarities between these technologies and wireless being among the most common between all of them (apart from WAN) as well as there being differences, some are cheaper to set up than others.
