A survey was carried out among 100 students of a university college on the causes of teen depression. Thirty percent claimed that assignments and examinations have led them to a great state of depression while one quarter of the sample believed that lack of confidence has caused them to feel stressed out. An equal percentage of the remaining students asserted that inherited traits, bullying and emotional shock are the responsible causes behind the problem.

8. Which of the following pie chart best represent the results of the survey?

A

- Low self esteem, 30%
- Heredity, 15%
- Coercion, 15%
