Method of staining of thick and thin film on same slide

1) Fix the thin smear in methyl alcohol for 1-2 sec and dry.
2) Immerses the slide in sol. A for 10 sec.
3) Wash the slide in a jar containing acidified tap water having pH 6.2 to 6.6.
4) Stain with the sol. JB for 1 sec.
5) Wash again in the same jar as above for 5 sec.
6) Immerses in sol. A again for 30 sec. or till the smear gives the pink background.
7) Wash again as above for 10 sec.
8) Dry and examine under microscope.
