- Felt humiliated by the museum of modern art. It is thought that he created this as a response to that.
- Weekend house built for a client. Was asked for a house with a view on the waterfall so he built the house over the waterfall. You can always hear it rushing beneath the house. 3 cantilevered trains that intersect in the centre. With the giant brick fireplace. Rocks from the riverbed that extend into the first floor.
- Has all kinds of structural problems
  - Mold, water damage, didn’t use the best material to build atop of a waterfall
- Organic architecture. The manmade being integrated into the landscape.

Buckminster Fuller, Dymaxion House
- Initially called 4d house
- Can be assembled, using an airplane can be put down on a hole or idk
- Uses tension rather than compression as is structural principle
- Hangs from a mast
- Electricity and plumbing and stuff are in the core
- Floors were meant to be blown up, almost like an airfilled balloon, light and bouncy
- Heated and cooled by natural means
- Earthquake and storm proof
- Required no painting and maintenance
- Naked women reclining on the bed, so comfortable you don’t need to wear clothes
- Science fiction. Utopian.
