Humans construct their beliefs in social context, little difference between scientific, political & religious theories as they’re all socially constructed to help make sense of the world. (Berger & Luckman)

Paragraph 6 (Science as an ideology) - **Evaluation**

Marxist = Science is used to increase capitalism, advances in machinery had a negative impact on W/C.

Feminist = supporting male domination, genetics and biochemistry show genetic differences. Science is male dominated.

Lyotard (post-modernist) – Science is no different to religion. Both are narratives to try and offer truth. However, no single belief system can explain everything about the world.

**Revision space for science as a belief system**
