8 + 1 = 9

Step 3: - Take the square of the number in the ten’s place.

\[ 1^2 = 1 \]

Now, write these numbers from right to left. The answer is 196.

- Take another example, say, 29,

Step 1: - 9^2 = 81

Take 1 and keep 8.

Step 2: - 2(2 \times 9) = 36

Add 8 to it. 36 + 8 = 44

Now, take 4 and keep 4.

Step 3: - 2^2 = 4

Now, add 4 to it. It is 8.

Your answer is 841.

**Squares of three-digit numbers**

This is calculated in the same way as explained above. Let us explain this with few examples.

- Square of 106:

Step 1: - 6^2 = 36

Take 6 and keep 3.

Step 2: - Here, we take the remaining digits, i.e., 10.

Multiply 10 and 6 and take double of it.
