Some other side effects rash, or difficulty breathing, or bleeding in the urine and others may occur.

The most common types of cancer among men:

Colon cancer, prostate cancer, lung cancer, bladder cancer and lymphoma.

The first cases of cancer in the world: A US study showed that the incidence of cancer were not the result of age, but it is due to the 120 thousand years ago, was discovered through to find the fossil of a man “Neanderthal” is showing symptoms of tumor super infection. Channel, “BBC” and the card can be found on the fossil record, and its skeleton is one of the oldest evidence of injury majority of cancer during the period of the history of ancient Egypt before the 1000-4000 year, where it was found on the impact of the injured rib cancer in an incomplete state, so difficult determine the extent of the effect of the tumor on the patient’s condition. The “Cat Arne” Director of Scientific Information Research UK cancer, and one of those responsible for the study, said that this discovery is not entirely a surprise but it is rare, it helps to shed light on the complex for the emergence of cancer history, where some believe it is the modern disease, but after the

Is discovery fossils and bones of mummies, dating back to thousands of years, prove the opposite? It was noted that researchers have made Vassar attempts to extract ancient DNA from fossilized “Naandral” using X-ray and cross-sectional survey operations, but failed.

World leaders who have been diagnosed with cancer who are in power:

Argentine President Fernandez:

Fernandez was diagnosed with papillary tumor has not spread. It is scheduled for surgery in the fourth of January 2012, it is expected to take a rest until the 24 of the same month.

Venezuelan President Hugo Chavez:

Chavez made his first overseas trip in December 2011 to Uruguay, after the Socialist president, aged 57 years, said he fully recovered after four sessions of chemotherapy. Doctors did not reveal the cancer that has plagued Chavez after months after undergoing surgery in Cuba to remove a malignant tumor in his pelvis type.
