During Mental Disorder

- Personal Disorders
- Disability
- Mental Disorder
- Dysfunction
- Validation of Social Aspects

Variations of DSM-5 disorders

- Many disorders have been classified; may be too many, creates overlap and difficulty in giving correct diagnosis
- Substance Abuse Disorders - alcohol abuse
- Psychotic Disorders - schizophrenia
- Mood Disorders - major depressive disorder
- Anxiety Disorders - panic disorder
- Somatoform Disorders - hypochondriasis
- Somatization Disorder - somatization disorder
- Gender Identity Disorder
- Dissociative Disorders - dissociative personality disorder
- Sleep Disorders - sleep disorders
- Eating Disorders - anorexia
- Adjustment Disorders - adjustment disorder with depression
- Organic Mental Disorders - Alzheimers

Criteria for Diagnosis

- Reliability
  - Inter-rater Reliability
  - High reliability if two more clinicians obtain same diagnoses
  - Reliability of DSM-III diagnosed
  - kappa of over 0.7 indicates good reliability (measure of non-chance agreement between raters)
  - Some high (CPG, CONC, BD) and some low (panic disorder, social phobia)
