Disorders of monitoring others' intentions
- Due to failure to infer knowledge/intentions of others
  - Delusions of reference
  - Paranoid delusions
  - Third person auditory hallucinations

Theory of Mind deficit and delusions
- Frith's model makes predictions concerning Theory of Mind performance in patients with different symptom profiles
  - Negative or disorganized symptoms: most impairment, cannot represent own or others mental states
  - Paranoid: some impairment, make incorrect inferences about mental states
  - Passivity or in cassion: indistinguishable from healthy controls
