

why we need to test on them. This is the one of the only ways to save our species otherwise we could all be suffering right now. We need to use animals for medical research to experiment potential medicine and treatment to treat conditions such as leukaemia, malaria, Parkinson's disease and even excruciatingly painful diseases including cystic fibrosis and many more. Such severe conditions and diseases must urgently be treated to reduce the suffering and distress that the affected people experience. Animals are the most reliable way to save us from deadly diseases and to increase our understanding to help ourselves survive through the unknown dangers of this world.

In conclusion, using animals for human purposes is appropriate and vital to human survival. We obtain essential nutrients from animal meat and produce, we require their assistance to make life simpler and for protection and using them as models allow us to evolve scientific and medical understanding. Developing our future to become safer and simpler requires the use of animals. Now it's up to you to decide, whose life is worth more?
