

- More unsaturated fatty acids, more permeable!
- ↳ More cholesterol,

MEMBRANE TRANSPORT:

- DIFFUSION
- FACILITATED DIFFUSION → No energy input
- ACTIVE TRANSPORT → Energy used; sodium-potassium pump

Random movement of molecules, no energy input
 ↳ High Concentration → Low Concentration
 ↳ Equilibrium (molecules still move!)

Osmosis

- ↳ Only water goes (even when in solution)
- ↳ High water conc. → Low water conc.
