

Python's math module

- Learn about the math module in Python for mathematical functionalities
- Explore functions like `ceil()`, `floor()`, and `sqrt()` available in the math module

Variables, Functions, and String Indexing

- Understand the relationship between variables, functions, and string indexing in Python
- Learn how variables and functions can be used to manipulate and access string elements

Input Function and Len Function for Strings

- Explore the input function for user input and the len function for string length
- Understand how to interact with users and calculate lengths of strings in Python

String Concatenation and Converting Types

- Learn about string concatenation and type conversions in Python
- Practice combining strings and converting data types for various operations
