

So if we want to know:  $\sin \alpha = 4/5$

If we would want to know:  $\tan \alpha = 4/3$

And finally if we want to know:  $\cos \alpha = 3/5$

I know that there is way more to trigonometry than just this but I want to keep a simple, I didn't want to make it too hard or too complicated. In future tutorials we're going to take a look at trigonometry in triangles that aren't right-angled, we're going to see some trigonometric identities, formulas, sin and cos rule, ...
