

10th November 2014.

L.O To be able to describe how vertebrates are classified.

Vertebrates - have backbones. (phylum / chordata)

Invertebrates - No back bone.

How they reproduce

How they regulate their temperature

How they absorb oxygen

don't understand
can you explain
again at lunch

Gills (young)
Lungs (adult)
Skin (moist)

Amphibians

Fish - Gills

Reptile - Lungs

Birds - Lungs

humans - lungs

Starter.

Vertebrates - Mean they have a backbone. (chordata.)

Homeotherm: stay at a certain temperature.

Poikilotherm - Not stay at a certain temperature.

Viviparous - out of stomach X Live birth.

Oviparous - no out of stomach. Lay eggs

Pay attention!!
