Lyme Disease: A New and novel vaccine

A ~~the~~ vaccine for Lyme was developed ~~in~~ ^{in Yale} ~~by Howard~~ in 1996 ~~in~~ response to the increasing infestation of Lyme in the United ~~states~~ States rural population. This vaccine would have worked by killing the Lyme bacteria as soon as it pierced the skin. Studies conducted in a Yale laboratory showed ~~that~~ that not only did the vaccine clear the infection from the victim, but also the tick which carried the disease ~~disease~~ to the human because of its ability to suck ~~to~~ the human's blood carrying the antidote into itself.

After citation

This vaccine would have been very useful, ~~had it~~ ~~it had passed~~ unfortunately it was discontinued research was discontinued because of lack of funding in 1999.

Because it takes 36 hours for it to transmit the infection.
