

market orientated system. But there are few factors that seem quite different in the economies such as the state interference. Where China has seen a state led economy through State Owned Enterprises (SOEs), India has had a more intervening State. Both economies are undergoing transition, China a gradual change, whereas India changing faster and thus growing at a faster rate. The inflow of FDI in China seems to be more complex due to the existence of traditional Maoist values go parallel with the innovative processes of the foreign Multi nationals. In India, the condition is different with the State providing room for expansion of multi nationals supporting and managing the economy rather than the former intervening nature. It's the time that would tell us who will win in the long run. But hopes and demand rising, India's chance of being on top is looming.
