

NFS daemons are:

- `rpc.nfsd`: Receives NFS requests from remote systems & translates them into local requests.
- `rpc.mountd`: Performs requested mount & unmount ops.
- `rpc.portmapper`: maps remote requests to the appropriate NFS daemon.
- `rpc.rquotad`: provides disk quota management.
- `rpc.statd`: provides locking services when a remote host reboots.
- `rpc.lockd`: handles lock recovery for systems that have gone down.

Starting NFS

nfs service starts portmapper, nfsd, mountd & rquotad daemons.
