production, suggesting significant complexities in these pathways. Nonetheless, miRNAs, namely the abdundant let-7, appear to play an important role in allergic lung disease.

2010;6(1):7. This is one of the few studies to look at the long-term effects of prenatal allergen and environmental pollution exposure on adult offspring mice. The study found a decrease in IgE production in mice exposed prenatally to A. fumigatus or diesel exhaust particles. Mice that were exposed to both allergen and pollutant were found to have decreased airway eosinophilia.

PLoS One. 2009;4(6): e5889. The authors studied the effects of the PGI<sub>2</sub> analogue iloprost on histone modifications in the Th1 and Th2 pathways. They found that iloprost had enhancing effects of histones in the Th2 pathway (histone H3 acetylation) versus suppressive effects of the Th1 pathway.
