

Succession: the natural changes in a community;

there are two types: primary and secondary, finally these changes creates a climax community and there are no more big changes and the community is stable

Community: is an environment made up of different populations of plants and animals that interface with one another

What is the **sequence** of change within a community undergoing succession?

Original Community----- Catalyst-----Over time----- Climax Community (Stable)

What **abiotic factors** can adversely affect a community?

- wind
- fire
- lightning
- drought
- rain
- temperature
- light intensity

Primary Succession

What is Primary Succession?

Primary Succession is an ecological succession that will transpire after the vacancy of a habitat.
