

HOW TO PRODUCE BLEACH

(WHITE STAIN-REMOVER)

ITEMS NEEDED

- 1) Chlorine
- 2) Caustic Soda
- 3) Soda Ash
- 4) Water

PRODUCTION PROCESS

- 1) Pour $\frac{1}{2}$ Kg of Chlorine into any empty bucket
- 2) Add $\frac{1}{4}$ Kg of Caustic Soda to it
- 3) Add $\frac{1}{4}$ Kg of Soda Ash to it
- 4) Then add 20 litres of water into it and stir it together
- 5) Then leave it for 2 hours to react
- 6) Filter it and pour the bleach solution

(Liquid content, separated from the powder) into a clean bucket, then package it.

Note: Always be safety cautious and very careful when handling chemicals and tools.
