

Therefore this is a large exception to the cell theory, and so in the beginning of time when the first organism came to be, there had to be a concept of cell theory which was broken in order to do this.

In conclusion, the cell theory constitutes the basics of life in which cells are made from pre-existing cells, all organisms are made from cells and lastly they are the most basic of structures which function in organisms. Although this essay lists many exceptions, most cells conform to the rules of cell theory.
