

Week 13a - Sports psychology

Contemporary approaches to using profiles:

- Disadvantages (mean or median split approach)
 - 1) Crude
 - 2) Scales
 - 3) Assumes an interaction is present
- Developments
 - 1) High-mod-low
 - 2) Cluster analysis
 - 3) Measurement tools (TEOSQ or POSQ)

Cluster analysis:

- Statistical analysis process which generates subgroups that represent genuine within-cluster homogeneity, while maximising between cluster differences
- Asses cluster differences (clusters become groups) on dependant variables
