

C.r.i.s.p.r could allow the immune system to be a better cancer hunter which could possibly mean the end of cancer.

There are also genetic diseases like Huntington's disease. With a powerful tool like C.r.i.s.p.r, we maybe able to end this.

Designer Babies

The second way C.R.I.S.P.R can affect our society is by designer babies. In a few decades, C.r.i.s.p.r will be powerful enough to edit a human embryo and you can give your child: extraordinary intelligence, an enhanced metabolism and much more.

Currently C.r.i.s.p.r can only remove genetic diseases from the embryo such as color blindness

End of Aging

The third way C.r.i.s.p.r can affect our society is by ending aging. We could do this by borrowing the gene of creatures that are immune to aging and apply it to our DNA using C.r.i.s.p.r. We won't stop aging but we could possibly slow it down by a few thousand years.

Research for this is still very new and many scientist are skeptical about the end of aging. The challenges are huge and maybe it is just not possible to end aging.
