Reading Disorders

Some of the reading disorders include:

Dyslexia

A disorder in children who fail to attain the reading skills of reading such as spelling commensurate with their intellectual abilities, in spite of having appropriate conventional classroom experience. It can affect a person's ability to read, write, spell, and sometimes speak. Dyslexia usually persists throughout life. A child with dyslexia has difficulty in learning to read despite provision of adequate instruction, having normal intelligence. The child has no vision or hearing problem that one could associate with the reading inability. It is caused by impairment in the brain's ability to translate images received from the eyes into comprehensible language.
