

Surgical Procedure for Implantation

(Tanvir, 2012)

Multiple Cannulated Screws (MCS)

If the patient does not have the surgery they will be left disabled in the long term and in a lot of pain.

However, Multiple Cannulated Screws (MCS) are an alternative to using DHS.

It is a less invasive technique, however DHS accomplishes a more stable condition.

Failure rate for MCS: 15.9%, a lot higher than DHS
