

Direct Counting Method.

This type of population technique is luxurious, but very quick and as well time saving method in which a sample of a low flying, flying machine is flown over a given area and the animals are then counted. This method has some benefits and disadvantages as well.

It's Benefits:

- a) The chances of counting the animals more than once is reduced.
- b) When counting aggressive animals, it reduces the risk of attack by the animals.
- c) The method is quick and time saving as well.

Disadvantages:

- a) The animals to be counted may over-up when they are disturbed by the aircraft.
- b) It is not possible for organisms living in the dense forest.
- c) Limited to large organism.
- d) It is costly.
- e) In some cases, it is always troubled by ruthless climatic changes.
