

- ❖ ETC – Electron Transport chain – chain which provided a passageway for the energized electrons from one photosystem to the next. This creates NADPH
- ❖ Light Independent reactions – Occurs in Stroma, where sugars are built using chemical energy to breakdown carbon dioxide and make sugars
- ❖ Factors that affect photosynthesis
 - Light intensity
 - More is better
 - Carbon Dioxide Level
 - More is better
 - Temperature
 - Increases at temp increase, but drops because it can get too hot denaturing the enzymes
- ❖ Carbon Fixation – pulling carbon out of the atmosphere
