

THE CENTRAL CORE

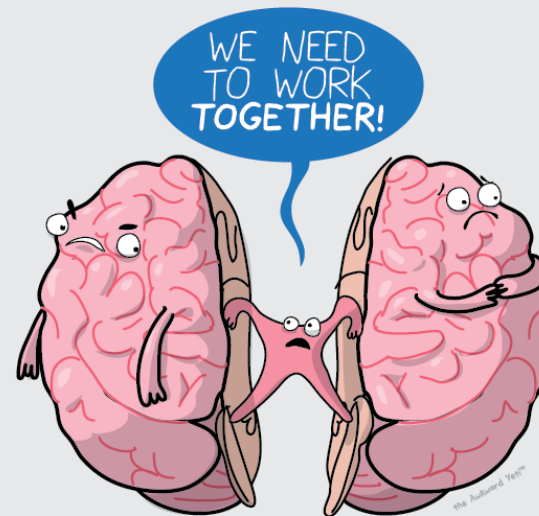

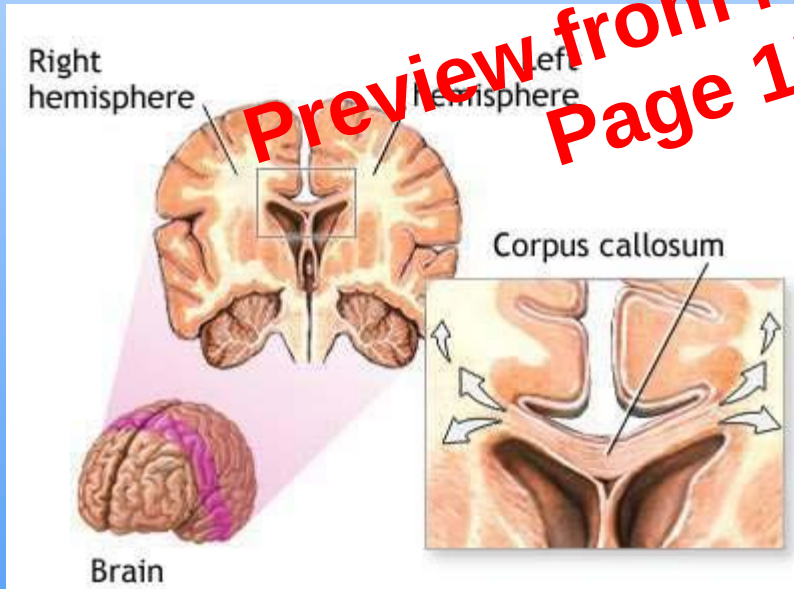

The central core contains:

- The **medulla** – which regulates basic life processes such as breathing, heart rate, sleeping and arousal (being awake and aware of the environment)
- the **cerebellum** – which is responsible for controlling balance, posture and movement

ANSWERS (CONTINUED)

5. Describe where information from one side of the brain is processed.

In the opposite cerebral hemisphere e.g. Information from the right side is processed in the left cerebral hemisphere

6. State the function of the corpus callosum

It allows the transfer of information between the cerebral hemispheres
