3. Right-click on **TCP\IP** and choose **Enable**. Click **OK** to the resulting prompt – you will restart the service after the next steps.

- 4. Right-click again on **TCP\IP** and choose **Properties**.
- 5. In the **TCP\IP Properties** dialog, click on the **IP Addresses** tab, scroll to the bottom of the dialog and then enter **1433** in the last field at the bottom of the dialog labeled **TCP Port**.

10. In the **Configuration Options** dialog, enter a password for your P6 administrator login. Again, make a note of this; if you lose or forget it, you will not be able to login to P6. You may also want to load the sample data, particularly if you are new to P6. This contains some useful sample projects and close logic tests that can be helpful in learning P6.
