

1. Covalent Bonding To A Cross-Linking Agent:

- Bonded to a matrix
- Allows enzyme to be active
- May damage enzymes

2. Entrapment (Physical)

- Insoluble beads/microspheres
- May take longer but is more gentle

3. Adsorption (Chemical):

- Glass
- Beads/matrix
- Weak forces
- Inert material
- Expensive but easy

4. Encapsulation/Enmeshment: (Physical)

- Trapped inside a selectively permeable membrane
