

Character ,Character Arrays and Strings

Character :

C/C++ support various characters (eg. A-Z,a-z,0-9,special charaters)

Any character define between in a single quotation marks is a string constant.

‘a’

‘f’ etc.

Declaring a character variable :

Syntax :

<char type> <variable name>;

example:

char ch;

char ad,ab,x; etc.

Initializing a character :

Char ch=’a’;

Reading a character from a terminal

The **scanf ()** can be use with **%c** format specification to read a character.(in C language)

Example:
