

STI (Sexually Transmitted Infections)

How is it transmitted?

They are transmitted when body fluids mix during unprotected sex with an infected person.

Which contraceptive would reduce the risk of an STD?

A condom would because it stops the mixing of fluids.

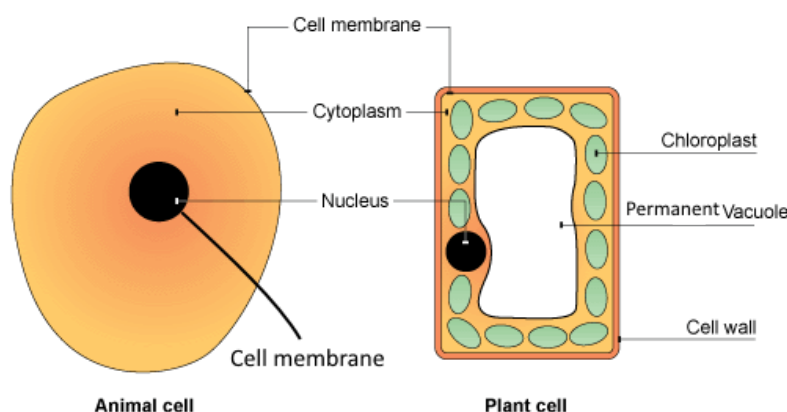

NEW BOOK-CELLS

All living things are made of cells.

They were first observed by Robert Hook in 1665 using a microscope which he made himself to examine a bit of cork. He thought the tiny boxes looked like monk's cells so he called them CELLS.

Organelles = Cell structures

Animal and plant cells

Animal cells and plant cells both contain:
