Introducing Fractions...

Fractions are part of a whole, for example if you had a pizza and split it into 8 slices and selected 1 of those slices the the fraction would be 1/8. There is different for different amounts of the whole, such as 1/2 would also be called 1 half. A fraction is more less than 1 but more than 0. Let's go back to the pizza if you take one slice CO from 8 slices then the fraction would be 58, we would write the 8 because there were 8 slices this is called the dewninator and we would write the Poecause that is how many slices we are taking this is also called the numerator. If we took 4 slices from an 8 slice pizza then it would be half because 4 is half of 8! We could write that 4/8 of we could simplify it, like 1/2 it's the same with a 12 slice pizza and we took 3 slices it would be that same as 1 quarter we could simplify this 1/4. If you had a fraction like 8/8 then that would equal a whole 8/8 = 1. Level 1
