

- Some are asexual and others sexual.
- They are classified into 5 divisions. The most important is deuteromycota because there are most pathogens.
- Yeasts are unicellular. It has been used for centuries to make wine and beer. The yeast is found in soil, water and fruit peels.
- Some molds produce antibiotics and large amounts of enzymes for detergents and foods.
- There are 4 types of mycosis (disease caused by fungi), superficial, cutaneous, subcutaneous and systemic.
- Subcutaneous and systemic are very severe. The systems are acquired by the inhalation of spores and are very difficult to eradicate
