

Phenotypic features

- (most) the result of multiple genes rather than single gene inheritance

Gametes

- sex cells
- sperm and eggs

Sex determination in humans

- In human body cells, one of the pairs of chromosomes, XX or XY, carries the genes which determine the sex. These separate and combine randomly at fertilisation.

	X	X
X	XX	XX
Y	XY	XY

Selfing

- where pollen from one plant lands on the stigma of the same plant
