

Using the concept of scientific method, create your own original poem or song.
Write your answer on the box provided.

Identifying the problem	Formulate hypothesis	Experimentation
Analysis of data	Conclusion	Recommendation

Let's do a research
To answer our curiosity
Conducting deeper study
By making systematic inquiry

Identifying the problem is the first we do
Look for the issues and concepts worth to study too
Formulate the hypothesis through gathered information
So we can proceed to experimentation

Let's not forget data analysis
To organize the data process
And finally get the conclusion
Which overview future possible research or call for action

After conclusions comes the recommendation
That provides suggestions on course of action
And see if it answers all the questions
So we can start the preparation of publication.
