

The Game theory

Math is behind the majority of decisions we take everyday and there is a field of science applies to social interaction...

Definition of the Game theory:

The interaction between multiple people in which each person's payoff is affected by the decision made by others.

John Nash (1928-2005)

The game theory was pioneered in 1950 by him, Nash's theories have influenced global trade negotiations, national labor relations and biology.

He was awarded by the Nobel prize in 1994.

This theory helps analyzing decisions you make and can contribute in any situation where people get together.
