- (d) ATP and/or NAD+
- 15. The glyoxylate cycle, in conjunction with the TCA cycle, accomplishes the:
- (a) net conversion of lipid to carbohydrate
- (b) complete oxidation of acetyl-CoA to CO2 plus reduced coenzymes
- (c) allows for the complete oxidation of glucose
- (d) produces NADPH and pentoses
- 16. Which of the following pathways is stimulated by epinephrine?
- (a) pentose shunt
- (b) glycolysis
- (c) gluconeogensis
- 17. Which of the following pathways is stimulated by gluade 22. CO. UK

  (a) pentose shunt

  (b) glycolysis

  (c) gluconeognesis Page

  (d) TCA cycle

- 18. Lactose intolerance involves:
- (a) the inability to metabolize fructose
- (b) the inability to metabolize galactose
- (c) the lack of the intestinal enzyme sucrase
- (d) the lack of the intestinal enzyme lactase
- 19. An example of gluconeogenesis is:
- (a) conversion of glycogen to glucose
- (b) conversion of glucose to glycogen
- (c) conversion of lactic acid to glucose
- (d) conversion of glucose to ribose 5-phosphate
