MODULE

ENGLISH PHONOLOGY AND MORPHOLOGY

For example, the sound of the English letter $\langle t \rangle$ may be transcribed in IPA with a single letter, [t], or with a letter plus diacritics, [th], depending on how precise one wishes to be. Often, slashes are used to signal broad or phonemic transcription; thus, /t/ is less specific than, and could refer to, either [th] or [t], depending on the context and language.

Occasionally letters or diacritics are added, removed or modified by the International Phonetic Association. As of the most recent change in 2005, there are **107** letters, **52** diacritics and **four** prosodic marks in the IPA. These are shown in the current IPA chart, also posted below in this article and at the website of the IPA.

Here's the updated chart of IPA:

THE INTERNATIONAL PHONETIC ALPHABET (revised to 2020)

	Bilabial		Labiodental		Denta	al A	lveolar Posta		lveolar	Retroflex		Palatal		Velar		Uvular		r Pharyngeal		geal	Glottal
