

HTML DISPLAY

You cannot be sure how HTML will be displayed, Large or small screens, and resized windows will create different results. With HTML, you cannot change the output by adding extra spaces or extra lines in your HTML code.

The browser will remove any extra spaces and extra lines when the page is displayed:

Example:

```
<p>
This paragraph
contains a lot of lines
but browser ignores it.
</p>
```

*Don't forget the
end tags.*

Example:

```
<p> This is a paragraph.
<p>This is another paragraph.
```

*HTML Line
Breaks*

The HTML `<br>` element defines line break. Use `<br>` if you want a new line without starting new paragraph.

Reminders

Most browsers will HTML correctly even if you forget the end tag. The example above will work in most browsers but do not rely on it.

Note:

Dropping the end tag can produce unexpected results or error.
