

No.:

Date:

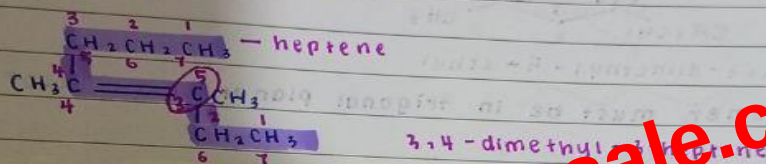

- indicate position of substituents
- between number and words use "-"
- between number and number use ","

Example:

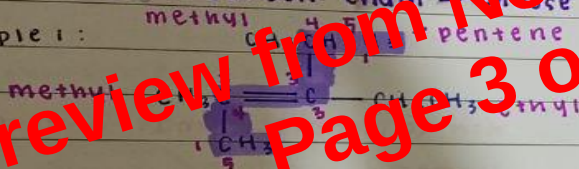

- same substituents use prefixes
- "di": 2, "tri": 3, "tetra": 4

Example:

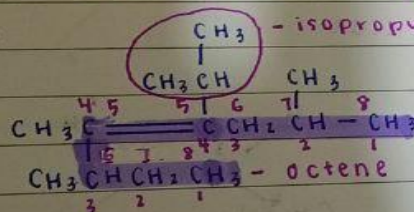

- same longest carbon chain - choose the one with more substituents.

Example 1:

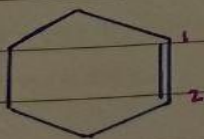

Example 2:

- both direction give same position to C=C.

- Choose the one substituents has lowest no.

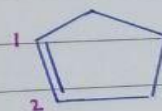

- C=C in cyclic must be numbered 1 and 2.
