

Biology - Structure and Functions

Introduction

- The basic structural unit of an organ is known as the **cell**.
- In 1665, Robert Hooke discovered the cell.
- A cell is a living organism.
- A human body has trillions of cells, which vary in shapes and sizes.
- The organism, which is made up of more than one cell, is known as multicellular organism.
- The single-celled organisms are known as unicellular organism. Eg. Amoeba.

Amoeba
