

Since it was not possible to make a network due to the available time and resources it was suggested that we learn about the equipments used in the network and learn how to terminate the cables used in the network for relaying data.

- The cables were to be cut and the wires (insulated with different colours) in it be arranged according to a given order of colour by the IEEE regulations.
- The wires are to be cut so that they are of the same length.
- They are then to be either inserted into a RJ 45 or a module.

### CONCLUSION

The week was a success, full of new information and learning of new skills.

The challenges faced were well dealt with by the assistance of the technicians in charge and fellow students.
