

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your knowledge or experience.

Write at least 250 words.

Answer:

Cars as a new innovation in the 19th century are playing an important role in today's transportation system. Recently, due to the number of cars usage increase dramatically, many people are advocate that cars should be replaced by other transports and drivers should also be guided under international laws. From my perspective, in order to protect our living environment, the government and individual should take action to reduce car usage as soon as possible.

Cars are consuming fuels which will create carbon dioxide that can cause air pollution and global warming. Nowadays, a ton of cars driving on the road and a huge volume of fuel be used, accelerating global warming and increasing environmental contamination. As a result, many wild animals and plants are facing extinction, natural disasters will happen more frequently, and our next generation will born with the health problem. All of these consequences are reminding us should begin to change our habits, taking other transports instant of cars.

Therefore, it is important to encourage citizens to use an alternative form of transportation. For example, the government can put more budget on building a local transport system, like increasing more bus stations and lines. Because of lower fees and more convenient, commuters will willing take bus every day rather than to take cars. In addition, formulating rules should also be considered. Compared with motivating individuals, compulsory international laws and regulations are more efficient. However, it is always too hard to let people put their personal car away to walk and spending the time to take other transports. So, the government should make some relevant laws to force people to change their habits. For example, one family only can have one car or each car only can drive on road 3 days per week.

In conclusion, while cars have been improved the quality of people's lives during these years, but according to the statistics from the British, it is so amazing that the number of cars increased to 29 millions in 12 years. Hence, we should not neglect side effects of using car and should begin to take action to protect our environment.

In general, check for

1. Articles
 - a. The, a an
