

Sample T-Test on the LQ-45 index, STI, FTSE BM KLCI, SET 50, PSEI it can be concluded that the Indonesian and Thai capital markets reacted strongly to the events of the 2014 world cup.

The limitations contained in this study are the research variables used are only actual stock returns (capital gains). The suggestions in this study are intended for further researchers, namely additions

The use of research variables to be tested such as using stock dividends, abnormal returns, and stock trading volume. Then the measurement of the return variable can use the opening price in the calculation, namely the opening price. Meanwhile, advice to investors is to pay attention to market reactions when an event occurs that can influence the decision to make a stock transaction. subtracting the close price by.
