Test Timing: Test-takers can choose a test date that allows them to prepare adequately and perform at their best on test day.

10. Testing Centers: The TOEFL has a widespread global network of testing centers, with more testing locations available worldwide than other English proficiency tests. This extensive network makes it easier for test-takers to find a convenient testing center near them, reducing the time and cost associated with travel. This also allows test-takers to choose a testing center that best suits their needs, whether in a large city or a smaller town. The availability of multiple testing centers is particularly beneficial for test-takers who need to take the test quickly, as they have more options for testing dates and locations. The wide availability of TOEFL testing centers also means that institutions and organizations can rely on a consistent and standardized measure of English proficiency, regardless of where the test-taker is located.

Other English proficiency tests may have limited testing centers, making it more challenging for test-takers to find a convenient testing location. This can result in increased travel time and costs, which can be a barrier to taking the test. In addition, having limited testing centers can also lead to variations in the test's administration and scoring, affecting the

preparation before re-taking the test. Other tests may have more restrictive re-take policies, such as a waiting period before a test-taker is eligible to re-take the test or a limit on the number of times the test can be taken.

18. Test Results Validity: The validity period for TOEFL results is generally two years, meaning that institutions and organizations typically accept scores that are at most two years old. This validity period is established to ensure that test-takers' English proficiency is current and relevant to their academic or professional needs. The validity period for other tests may vary, with some tests having a shorter validity period of 6 months or one year, while others may have a more extended validity period of 3 years or more. It is essential for test-takers to be aware of the validity period for their test results and to plan accordingly to ensure that their scores are valid for the period they need them.
