

is A mark sublime culture Which owned public For alwaysvalue nature and environment.

2.4 Climate Tropical

Climate is Wrong One aspect important in design architecture, including in inside House stay. Climate will influential direct on comfort take place stay for its inhabitants. Elements climate Which will influential is hot consequence exposure ray sun, humidity air, air movement and rain. Thus the design of buildings in the area humid tropics will refer to efforts: how to reduce heat in room, adjust room lighting, set ventilation so that air movement optimal achieved as well as regulate flow water Rain.

2.5 Technology Modern in Anticipate Problem Tropical Moist

reviewed from scale application technology, system For anticipate tropical climate problems and potential utilization of tropical humid climate line large can be divided in three type.

- a. System anticipation to climate tropical moist with element building without application of mechanical and electrical equipment.
- b. System anticipation to climate tropical moist with equipment technology mechanical minimal electrical (between others: fan).
- c. Anticipation system for humid tropical climates with the application of electrical equipment mechanical (among others: air conditioning) and building materials (among others: ray ban glass, silicon etc.), energy utilization Sun with solar cell, photovoltaic etc.

2.6 The Combination of Local Wisdom and Latest Technology in Realizing Building Modern Which Respond To Problems Climate Local in Indonesia

In the midst of the era of globalization in all fields, contextual elements with environment in matter This climate local in side culture And etc. Required
