each chromosome in a pair carries genes which code for the same characteristics

Stem cells

Unspecialised cells which can differentiate into many different types of cells. Human stem cells are found in embryos and in bone marrow.

It might be possible to grow new organs for transplants from stem cells.
Reconnect spinal nerves, conditions treated with stem cells.

Ethical issues involved with using embryos for stem cells, embryonic stem cells in the umbilical cord contain stem cells.

Therapeutic cloning includes using cells to produce a cloned early embryo of a person as a source of perfectly matched stem cells.
