

this question which we did earlier This is your homework. Do this one Now let 's try out this variant. It includes spaces too You can see that before printing these characters , we have to print some spaces too We have to use two spaces , one for printing space and other one for character. These are very easy questions if you have understood previous questions. We can see that there are three components - Spaces , a triangle and one another triangle. If you are able to do this one without my help, then it is very good for you. But if you are not able to solve this one, then no need to worry. I will tell it 's solution and then give you one more question to try as your homework. This was for today 's video. In next one , we will see operators , bitwise operators , For loop , and many more interesting things. You should finish your homework. Also tell the answers in comment section for the questions which I asked inbetween of the video.
