

Class 12th – Overview of Integration | Integrals | Tutorials Point

Tutorials Point

The new chapter that we are going to start after application of derivatives is integrals or integration.. This is also under the calculus unit and it is very important because the next two chapters are based on this only so integration or integrals. What is it how is it related to the previous chapter of differentiation..

integration is also called as any derivative because you are basically going for the reverse process of differentiation. It is also known as primitive and antiderivative. the next important thing that you have to know is always this arbitrary constant would not be added. We are going to study two types of integration..
